

Product Vision: Online Flashcard System

Team: Artturi Maanoja, Rafi Nadri, Frans Huhta-Koivisto

Tech Stack: JavaFX, MariaDB

Course: Sprint 1 Product Vision

PROBLEM STATEMENT

Students often find studying for exams disorganized and inefficient. Many existing flashcard apps are overly complex, contain ads, or charge fees. Additionally, teachers do not have an easy, direct way to share custom study sets with their classes.

TARGET AUDIENCE

Students who need a simple tool to create flashcards and test themselves, and teachers who want to upload and share study materials with their students.

VALUE PROPOSITION

A simple, free desktop app built with JavaFX and MariaDB. It gives students an easy way to study with flashcards and quizzes, while allowing teachers to upload course materials directly.

KEY FEATURES

- **Student Deck & Quiz Creation:** Make custom flashcards and practice quizzes.
- **Study Mode:** Flip through flashcards for active recall practice.
- **Teacher Material Sharing:** Upload and organize flashcard sets by subject for students.
- **Database Storage:** Save all users, decks, and cards using MariaDB.

GOALS AND OBJECTIVES

- Build a complete, working desktop app by the end of the project.
- Keep the user interface clean, simple, and easy to use without a learning curve.
- Ensure smooth database integration for saving user cards and teacher uploads.

VISION STATEMENT

Our vision is to build a practical and simple flashcard app that makes studying easier and more engaging for students while giving teachers an easy way to share study sets.
